Research Interests

My research lies at the intersection of human-computer interaction (**HCI**), responsible artificial intelligence (**R/AI**), and digital health equity. I design, build, and evaluate sociotechnical systems that enable positive social transformation for underserved communities. Specifically, my work centers on computing in high-stakes healthcare settings, with a particular focus on developing novel AI and data-driven systems to support formal and informal caregivers as well as the older adults they care for.

Industry Experience

2019-2020

Software Engineer
Opentrons, Brooklyn, NY, USA
https://opentrons.com

I worked as a member of the Platform team building and managing our open-source software. We focused on developer experience, interoperability, and cloud infrastructure. I worked on our public APIs built using Python with FastAPI and Pytest. Additionally, I supported efforts on our desktop and web applications using technologies such as Electron, Node.js, React, Flow.js, and Jest.

2017-2019

Lead Software Engineer
Clark, New York, NY, USA
https://hiclark.com

As a member of the engineering team I helped establish our technical direction, lead/participated in research initiatives, onboarded new hires, and mentored junior members. Clark's APIs were built using Ruby on Rails based on the JSON API spec and tested using Rspec. Our frontend clients were built using React, Redux, Styled-Components, Flow.js, Jest/Enzyme, and Node.js.

2017

Product Engineer
Mic, New York, NY, USA
https://mic.com

I was part of the team responsible for the Mic.com web application rebuild. Mic.com was rebuilt using server-side rendered React, Redux, Graphql, Flow.js, Chai/Enzyme, Node.js, and Kubernetes for deployment orchestration.

2014-2017

Product Engineer

Made by Many, New York, NY, USA
https://madebymany.com

I worked as part of an interdisciplinary team researching, prototyping, and building complex web and mobile applications. I built a mobile application using React Native and web applications using technologies such as React, Redux, Elixir/Phoenix, and Ruby/Ruby on Rails.

2013-2014 **Technologist**
Big Spaceship, Brooklyn, NY, USA
https://bigspaceship.com

I collaborated with designers, strategists, data analysts, and technologists to create compelling campaign websites and web applications.
